

**Dear Sir or Madam,**

We are back from the summer break well rested and we are starting full of energy with lots of new product ideas. Have a look and wow yourself with our expanded range and new additions.

We look forward to receiving your questions, feedback and maybe even seeing you in person at the trade fair.

*Your Desoi Team*

**INJECTION TECHNIQUE**

**B-PROFILE - Adaptive injection profile**

For sealing leaky expansion joints

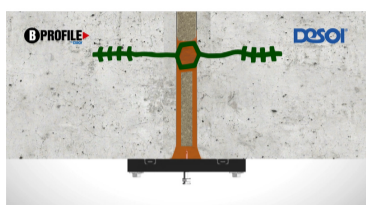

The B-PROFILE with integrated rubber sealing lips is perfect for subsequent sealing of leaky expansion joints by means of injection. This simplifies work procedures and is less time consuming than more traditional methods. The B-PROFILE can be worked with in the length of your choice, is suitable for joint widths from approximately 5 to 50mm and can be reused after cleaning.

**THREAD UNSCREWING UNITS**

**DESOI is back at EXHIBITIONS with the latest products!**

**FAKUMA Friedrichshafen**  
12th until 16th, October 2021 - Hall A1 booth no. 1122  
[www.fakuma-messe.de](http://www.fakuma-messe.de)

**Electrical thread unscrewing unit special model: SR25-8**

An optimal solution for every thread - we are your partner!

**Special feature:**

Angled servo drive with a center distance of 45 mm

**Application:**

16-cavity mold, for injection molded parts with a length of 0 – 20 mm

The electrical thread unscrewing unit is a separate drive for thread demolding on injection molding tools. The units can be mounted on existing hydraulic or fully electric injection molding machines. The 24V signals of the injection molding machine, e.g. those of a core pull, are used for control and monitoring. Thanks to the tailored operating and control unit, there is no need for programming with a separate PC on the injection molding machine.

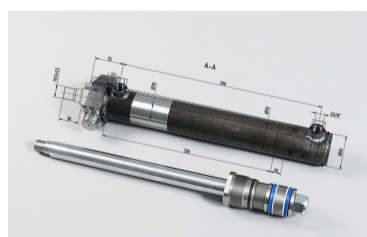

We would be happy to advise you personally and find the optimal solution for your thread from our range.

**ENGINEERING & TECHNOLOGY**

**Hydraulic cylinder/telescopic cylinder - reconstruction**

We manufacture and design hydraulic cylinders according to your specifications and drawings in our in-house production.

The cylinders can be combined individually, such as stroke length, pressure connections, thread sizes, position of the suspensions, etc. The application possibilities of hydraulic cylinders are endless, such as for construction machines, industrial trucks, sawmills, mobile hydraulics, single or double-acting cylinders, as well as cylinders for higher temperatures (foundries) and much more.

**COMPANY**

**The first step into professional life has begun**

Our trainee has been working for us as an office management clerk for over a month. We warmly welcome Domenik Arnold and wish him an exciting time at DESOI GmbH. Managing Directors Regina and Martin Desoi along with the whole team look forward to working with him.

**We are part of Team #Sleevesup!**

We were also able to carry out a vaccination campaign within the company. The health of our employees and their relatives is very important to us. Those who had not yet had a vaccination offer took advantage of the offer. We believe that this is an important step towards containing the COVID-19 pandemic.

**Lunch by Foodtruck**

Unfortunately, the traditional summer festival was canceled again this year. However, a small event took place, with invites sent for an open air lunch break. The relatively newly founded food truck from the neighboring town spoiled us with all kinds of burgers on the company premises.
