

Dear Sir or Madam,

In this month's newsletter we have both new and old to tell you about!

Don't hesitate to write or call us – we're more than happy to talk with you personally or just to send you more information.

INJECTION TECHNIQUE

AirPower S25 – Innovative, compelling technology

In order to satisfy the requirements of injection companies now and into the future Desoi has developed a new range of light and handy pumps. The pneumatic piston pumps of the S25 series, capable of injections of both single and multi-component materials, are easier than ever to transport, operate and maintain.

Successful injections in underground structures and excavation projects – Expansion packers with air purge

Simple expansion packers are currently used for injections in nearly every kind of drilling, tunneling and large-scale excavation project. Injections are used to improve the mechanical properties of surrounding ground and to prevent water seepage.

Air purging guarantees that the entire cavity is filled by allowing air to escape. Expansion packers with air purge are ideal for difficult ground conditions where it's necessary to eliminate and prevent any layers which might allow water to flow. [Read more](#)

Catalogue 15

The new catalogue will be published in a few weeks.

Our services and products have been reorganized to improve clarity and to better integrate our innovative new products. In addition, we have added easy-to-understand sections describing practical working procedures.

ACCEPTING PRE-ORDERS!

DESOI Injection technology – in demand like never before

The demand for standard products and individual productions is constantly growing and the large demand partly leads to DESOI-untypical delivery times, for which we apologize to you. So that you can place your order as usual, quickly and reliably, we are expanding our production. However, depending on the product, we ask you to assume longer delivery times and to adjust your orders accordingly. Of course we will inform you!

We look forward to continuing good and trusting cooperation and thank you for your understanding.

COMPANY

New apprentices at DESOI

From the beginning of August 2018, 4 additional apprentices have taken up their work with Desoi. Sabrina will support us in the office, Lea in technical product design, Konstantin in our machine engineering department, and Manuel in our metalworking department. One-year trainee Hannah supports the colleagues in the office. – **Welcome to all of you!**
