

Dear Sir or Madam,

DESOL informs about novelties and proven products!

Write to us or call us, it will be a pleasure to advise you individually or send you further brochures.

The **injection drill needle** developed and patented by DESOL is used for targeted joint sealing, especially in sealing joints of segment tunnels.

New is the **DESOL PowerPump 19Z** for filling masonry joints due to its material-protecting conveying function.

Also find out about the proven **ram injection lances** for injections into the soil, e.g. for soil consolidation and lifting injections.

Ram injection lances

Ram injection lances are steel tubes with tips used for injections into the ground, e.g. ground solidification, stabilisation of constructions, lifting injections, etc. Without predrilling, the ram injection lance is rammed into the non-rocky ground and then injected. Depending on the ground condition, big depths are reachable offering a good effective area. If used below foundation plates, the structural element has to be provided with holes through which the ram injection lance can be driven into the ground. [Read more](#)

COMPANY

DESOL seminars successfully finished

For 25 years DESOL in Kalbach has been holding specialist seminars for users in the field of injection technology from November to March. With more than 100 participants and 6 double dates, the seminar series is fully booked every year.

The aim of the specialist seminars is to pass on specialist knowledge to customers and interested parties, to consolidate what has been tried and tested and to point out new possibilities. The DESOL team teaches in theory and practice current applications in the field of injection technology, so that the participants can actively participate in the diverse specialist programme. Quality Management & Environmental Management

The high level in our diverse business segments was also confirmed in the second monitoring audit.

DEKRA has certified us in the area of environmental management (ISO 14001:2015) and our company's management system (ISO 9001:2015) still meets the requirements.
